Not only that, it was sold in different custom package versions. I have seen a long slender cardboard box version as well as the version shown here. Removing the plastic shrink wrap and outer sleeve reveals a plastic case. Opening that case reveals the watch seated on a red velvetlike tray. In that tray, you will find an instructional audio cassette tape. Since I got this watch in 2008, I didnt have a cassette tape player to listen to the tape. I wonder what it sounds like. And if you lift that tray, you will find not one, but TWO manuals. The blue manual is the abbreviated version that briefly covers the blood pressure functions, whereas the black one covers the entire watch in detail. The special packaging and redundant instructional material leads me to believe that Casio intended this watch to be used by people unfamiliar with technology. Im not sure how successful Casio was in their marketing strategy, but its interesting to note. Enough about packaging, get on to the watch already.Its got a builtin microlight, along with alarm, stopwatch and timer modes. But what makes this watch special is the blood pressure functions. The watch actually uses a combination of two sensor technologies. The pad on the left reads the pulse using a photosensor, exactly like the JP100W. The BP100 manual includes a schematic of this photosensor technology. The pad on the right is one lead of a twolead ECG probe thats built into the watch. Can you guess where the other lead is. Its on the watch backplate. Those leads measure the electrical signal that accompanies your heart beat. For the system to work properly, the watches backplate must make contact with your bare

wrist. In addition, your right hand can only touch the two sensors because if you rested your right thumb on your left wrist or vice versa while making this measurement, you'd create an alternate conduction path. But how does Casio use these sensors to measure blood pressure. Well, it does not. <http://247christianity.org/fckeditor/userfiles/file/buicklesabre1994repairmanual1598877979.xml>

The watch obviously doesn't have a built-in cuff or air pump that can measure the real absolute blood pressure. I found this excellent website that describes the science in detail, so I'll leave interested readers to follow up on this link. To take advantage of the PWTT concept, it just so happens that you need to take the measurements at your extremities. Lucky for Casio, a wristwatch is the perfect candidate for this application. PWTT, by itself, can only tell you the relative changes in blood pressure, not an absolute number. Therefore, you have to input some basic data into the watch before using any of its blood pressure features. After you input your normal resting blood pressure, you're good to go. You can also input your post-exercise BP to use the more advanced functions. When all that's done, just press the button and relax. But once you do it right, you will be greeted with this screen. Note that it also measures your heart rate. The watch can store up to 30 BP measurements, which is automatically timestamped. You can even view your past measurements in graph form. Note that I only have 3 datapoints stored in the below graph. If you had all 30 datapoints stored, it would show a nice filled graph. One last thing, the back plate on the BP100 breaks two Casio conventions. 1. It does not show the module number. 2. It has a serial number, which is very unusual for a 90s model with resin case. The BP100 was successful enough to have several variations and follow-up models. These include the BP120, BP200 and BP300. As far as I know, they are functionally the same but have some major cosmetic changes. If you are looking for one, good luck. And if you are looking for a PDF manual for this watch, here it is! Thank you very much for writing this blog to the precise details. Keep it up. Thank you! I could, however, do it on my own and now that, after years of neglect, I have had the battery replaced, it works fine.

I have the manual somewhere but it is easier to download it, thanks to you. The screen is gone black and I was wondering if it is possible to repair this damage. Any help or advice would be greatly appreciated. Thank you for your attention. Best regards, Alvano Indonesia. Thanks a thousand times. It works fine as good as new after 15 years! Keep up the good work. But when I finally found the watch again, I couldn't find the instructions to use it correctly. Major thanks to you and your willingness to put it online! Changing the battery is quite easy although replacing the thin rubber oring, situated between the body and the backplate can be a bit fiddly. I got mine in 1992 and it still works fine. Now that I've read the manual and set it up properly I find its measurements to be pretty similar to my Omron automated cuff and I'm back to wearing it daily. I still have the cardboard presentation unit used to show it in shop windows. Casio always has been a pioneer in electronic wristgadgets that worked perfectly well. Together with Seiko, of course TVwatch, pulsewatch with belt, talking watch. Japanese are the best watchmakers! Please keep it alive in the name of the old LCD Casio watches! One of my favorites. Works as good as the smartwatches we see nowadays. And I presume Italian speaking people will say the same with the Italian version and so on. Could you put at least the Spanish, French, Italian and German versions online. I know it's a lot of work, but it could make some lives easier. Thanks in advance! Really good review you did. Thank you. Great condition for age fully working!!! NOTE I have ordered a new quality Japanese Maxell battery and I will install the new battery before sending to the lucky buyer, so you will receive it fully working, setup and ready to use. Instructions in PDF format can be downloaded here info can be found here contact me if you need more info. Note International buyer must contact me prior to bidding. Installed a new Panasonic battery.

Be sure you read this. User's Guide before trying to operate it. To ensure your personal safety, Monitoring your blood pressure provides you with vital feedback about High blood pressure, for example, often All of this means that daily blood pressure readings for the purpose of The CASIO

Blood Pressure Monitor Watch and Base Unit make it Together, they provide you with At home. Note See the "Module No. 2420 User's Guide" for Blood Pressure Monitor Base Unit BP1MY, and "Watch" refers to Make sure you Batteries. But today, thanks to the advancement in technology, all you need is a blood pressure checker to measure your blood pressure from the comforts of your home. Oh, and you needn't head out anywhere to buy it either, as you can buy the best blood pressure monitor online from your favourite shopping site. Pick from a range of blood pressure

machines from popular brands such as Dr. Morepen, Omron, Citizen, Dr. Trust, Hicks, and Diamond. Here is a handy guide to a few blood pressure monitors to help you make an informed buying decision.

But, before that let us try to understand why it is necessary to have this machine at your home. Why Do You Need a Blood Pressure Monitor Picture a situation like this a family member at your home is diagnosed with hypertension. In order to maintain an optimal health, he needs to check his blood pressure regularly. Now, going to the doctor for this quite often sounds tedious, right. This is why it is necessary to have a blood pressure monitor within your arms reach. These monitors are mainly of two types arm monitors and wrist monitors. Just as how the name suggests, an arm monitor is the one where you need to wrap the cuff around your arm to check your blood pressure. A wrist blood pressure monitor, on the other hand, is compact and lightweight. You need to wrap it around your wrist just like a watch to record your blood pressure reading. Omron Blood Pressure Checker HEM 7120 BP Monitor Bring home this blood pressure checker from Omron to get accurate measurements easily. This device can be wrapped around your upperarm to know the hypertension indication. This device is also equipped to recognize irregular heartbeat. This machine records your previous reading, so that, you can see it once before taking the next one. What's more This machine can be easily used by anyone as it can be operated with just a touch. It is also enhanced with IntelliSense Technology to provide more accurate readings. Dr. Morepen BP16 Colored Display BP Monitor An ideal instrument for people who have a difficulty with sight, this BP monitor indicates the blood pressure level in color for easy identification. So if your pressure falls in the normal range, the monitor will turn green. The monitor turns orange when it is in the middle range and the color red indicates when the pressure level belongs to a higher range. This upper arm blood pressure monitor also detects irregular heartbeats and has a maximum pressure measurement range of 260 mmHg.

Diamond DM25 Dial Deluxe Blood Pressure Apparatus BP Monitor This blood pressure apparatus from Diamond is designed to give accurate results. This analog monitor has a pressure range of 20 to 300 mmHg. Oh, while most of us usually find the cuff uncomfortable, this apparatus ensures that it fits well over your arms with velcro fastening. This apparatus also has metal parts that are treated with nickel and chromium to prevent corrosion. A really innovative CASIO BP120 from 1990s in Very Good cosmetic condition and time accuracy. All parts original Made in Japan. Casio Computer Co., Ltd. Kashio Keisanki Kabushikigaisha is a multinational consumer electronics and commercial electronics manufacturing company headquartered in Shibuya, Tokyo, Japan. Its products include calculators, mobile phones, digital cameras, electronic musical instruments and digital watches. It was founded in 1946 and in 1957 released the worlds first entirely electric compact calculator. Casio was an early digital camera innovator. During the 1980s and 1990s, Casio developed numerous affordable home electronic keyboards for musicians. Casio was established in April 1946 by Tadao Kashio, an engineer specializing in fabrication technology. Kashios first major product was the yubiwa pipe, a finger ring that would hold a cigarette, allowing the wearer to smoke the cigarette down to its nub while also leaving the wearers hands free. Japan was impoverished immediately following World War II, so cigarettes were valuable, and the invention was a success. After seeing the electric calculators at the first Business Show in Ginza, Tokyo in 1949, Kashio and his younger brothers Toshio, Kazuo and Yukio used their profits from the yubiwa pipe to develop their own calculators. Most of the calculators at that time worked using gears and could be operated by hand using a crank or using a motor. Toshio possessed some knowledge of electronics, and set out to make a calculator using solenoids.

In the 1980s, its budget electronic instruments and its line of affordable home electronic musical keyboard instruments became popular. The company also became well known for the wide variety and innovation of its wristwatches. It was one of the earliest manufacturers of quartz watches, both

digital and analog. It also began selling calculator watches during this time. It is one of the first manufacturers of watches that could display the time in many different time zones and of watches with temperature, atmospheric pressure, altitude, and even Global Positioning System displays. ABOUT THIS WATCH FOR SALE Except all the time functions like alarm, day, date, hour, minute, seconds etc. Obviously its a watch that someone would like to buy for collectible or historical purposes. The sensors sometimes are working after hard pressure see included manual in pdf and sometimes are not so for this characteristic you will buy it with your own risk. Case and LCD screen are in MINT condition without any marks or scratches. Back case also very clean. A very attractive watch due to its multiple functions. It is offered with pdf manual in English that will be sent to the buyers email just after the clear payment. You are the light of the world.
