Sabine Cyborg Studio Relaunch Your website is invaluable to vintage gear junkies like myself. Thanks! Rich Cyborg Studio Samples Your Website is fantastic. Ian Prophet 600 Samples I just stumbled upon your website while looking for Prophet 600 preset demos great job on it. Keep up the good work. Jed Roland R8 Samples The R8 rocks. I love it. Thanks again for everything. Ugo Kurzweil K2661 Manual exactly what I needed. You've been a big help. Maurice Vintage Analog This is an awesome website, very inspiring. I wish I could buy all the sound sets from you, especially the old analog stuff. Manny Cyborg Studio Relaunch Thanks a lot for opening again the website. And also thanks for keeping the spirit of the classic electronic instruments alive!!! Pere By continuing to browse the site, you are agreeing to our use of cookies. No cleanup reason has been specified. Please help improve this article if you can. October 2009 Learn how and when to remove this template message It was the second entry in their DR series, following up on the much simpler DR55. It has an LCD graphic display, showing a step programming grid for the various drum voices. Rubberized touchpads each represent one of the DR110 voices, and can be used to build a pattern in realtime as well as to enter and edit note data. Tempo is continuously variable between 45 and 300 bpm. <http://escolaalfa.com/userfiles/contest-manual.xml>

These devices had much the same functionality as the DR110, but relied upon digital buttonpress control of parameters rather than knobs. The cymbals and hihats are created by VCA shaping and bandpass filtering a combination of white noise and four non harmonically related square wave oscillators generating a much more realistic sound than white noise alone. The clap sound uses only shaped white noise, but was triggered by a multiple pulse train, to create a reverberation effect. No tonal variation of the voices is possible; however as with several earlier Roland drum machines, the relative balance is variable between the bass and snare drums versus the hihat and cymbal. An accent volume increase can also be added on any pattern step; the amount of accent is globally variable with a knob. Each pattern can be divided into 16 or 12 steps. A small battery retains memory content when the DR110 was switched off. This output can be plugged into a keyboard amplifier or PA system. The entire LED screen shows. The user turns the unit off and then on to exit test mode and go back to normal mode. By using this site, you agree to the Terms of Use and Privacy Policy. The latter is similar to the rectangular pulse, with the exception, that instead of returning to zero volts, it goes into a high impedance state. This allows it to make use of the characteristics of an existing pulse shaping network, such as an RC network built into the drum machine. The pulse shapes have different sonic characteristics, experimenting which suits best is recommended. The Gaussian pulse for example contains less higher harmonics and can be used to simulate drums hit by a felt headed mallet. This allows it to sync the drum machine to the midi clock. Clock dividers and polarity are adjustable in order to achieve compatibility with all drum machines. Clocks speeds

between 48PPQN dinsic 48 and 1PPQN one pulse per quarter note are possible.<http://oumkua.com/userfiles/context-chameleon-tx36-service-manual.xml>

By using the 16 pulse outputs, the uniPulse can output up to 21 different clocks simultaneously. We are constantly working on expanding a database of presets for common drum machines. For each channel, you can select pulse shapes, polarity, length, midi channels, note numbers and mappings. For sync outputs clock dividers can be chosen. A velocity sensitive test button can be used to instantly listen and refine your configuration, and thus choose what sounds best for your particular drum machine and taste. The program can be found here uniPulse Configurator A list of these manuals can be found here uniPulse drum machines overview This will be rewarded by Tubbutec with a discount on your next order. Thanks a lot for contributing. See uniPulse contribution. We ship from Germany with fixed shipping costs worldwide. If you want us to install the mod for you please contact us. Please only order if you are sure you can install it. Read the general manual to get an idea about the uniPulse and what it requires to install. What can I do Only lead free components and solder are used. If your machine is not on the list, please contact us. If there is an installation manual available for the particular machine, click the name to get to the uniPulse installation manual. No link means installation is possible, but we don't have a manual yet. SDS 3 SDS 4 SDS 5 SDS 6 SDS 7 SDS 8 SDS 9 Analog Claptrap Digital Claptrap Read more about this in our post. Dismiss If you continue to use this site we will assume that you are happy with it. Ok. Well, get a DR110. The only sync it's got is a trigger out with each accent, but that's easily remedied with a few splashes of solder. It sounds like a cleaned up TR606 with handclaps instead of toms. I'd say it's your essential analog drum sounds, except that you can't adjust Bass Drum decay. But it's more portable than any x0x box, running on just 4 AA batteries and half the size of a 606. And the buttons are nicer to the touch.

The last of the line of Roland analogue beatboxes, this is their technology at its peak. Just a lot less user configurable. At the least, make it DIN SYNC, and it's practically a 606 without volume control, and could sell for the price of a 606. Ticky Roland noise snare, your Roland hissy analog hihats, ride cymbals bell-like, like the 606s, and the Bass drum. Oh, did I mention the handclaps are the best! Not real tunable... But I'll be working on making some mods once I get my spare guinea pig DR110. Reproduction in whole or in part in any form or medium without express written permission from Sonic State is prohibited. The Boss Doctor Rhythm DR110 Graphic is a drum machine, produced by the Boss product division of the Japanese Roland Corporation in 1983. Although not designed as a highend studio product, it nonetheless featured some noticeable advances in technology compared to previous Roland drum machines it had an LCDgraphic display, showing a stepprogramming grid for the various drum voices, and allowed the drum sounds to be played manually from rubber padsas well as programmed Like all Rolands previous drum machines, the DR110s voices used analogue voice circuits. Tempo was continuously variable between 45 and 300 bpm. The cymbals and hihats were created byVCashaping and bandpass filtering a combination of white noise and four nonharmonically related square wave oscillatorsgenerating a much more realistic sound than white noise alone The clap sound only used shaped white noise, but was triggered by a multiple pulse train, to create a reverberation effect. No tonal variation of the voices was possible, howeveras with several earlier Roland drum machines the relative balance between the bass and snare drums versus the hihat and cymbal. Bidders from outside UK to request international postage cost.

Information below sourced online The Doctor Rhythm DR110 Graphic is a. Produced by the Boss product division of the in 1983. Boss were better known for producing accessories such as. Although not designed as a highend product. It nonetheless featured some noticeable advances in technology compared to previous Roland drum machines it had an graphic display. Showing a step programming grid for the various drum voices, and allowed the drum sounds to be played manually from rubber pads as well as programmed Like all Rolands previous drum machines. The DR110s voices used voice circuits. The DR110 used a 4 HD33790A44 and 1 of PD444C memory. Drum sounds The DR110s six drum voices were Open closed hi hat, As with most previous Roland drum machines. But was triggered by a multiple pulse train, to create a effect. No tonal variation of the voices was possible. However as with several earlier Roland drum machines the relative With some small signs of wear but complete and extremely detailed. With specs, exploded views, disassembly, full parts list, circuit diagrams, test program, lots of schematics and more. Check out my other items! Seller added the following information THIS ITEM IS SOLD AS IS UNTESTED AND MAY NOT WORK. A good project for modifying and or repair. AS IS SALE. The sounds are Kick.

Snare, Closed HiHat, Open HiHat, Cymbal and Clap. The sounds are totally analog, and sound crisp and punchy, thanks to tone generation circuitry that is more sophisticated than the Roland. A balance knob alters the level of the Kick. Snare and Clap relative to the other sounds, while an accent knob controls the amount of emphasis applied to accented steps. There is also a volume knob, which controls the overall level of both the main and headphone outputs. The main output is mono, but has an unusual feature whereby plugging in a suitable wired lead with a stereo jack plug allows for the feeding in of another signal to be mixed with the drum sounds. Another socket provides for a trigger signal. The patterns are organized into four banks of eight patterns each. Banks C and D are the presets. While banks A and B are programmable. Two songs can be programmed, each containing a maximum of 128 bars. At the time of writing. The Dr. Rhythm Graphic is relatively affordable compared to similar machines such as the Roland. And are usually found in good condition thanks to the padded carry case that they came with. On the downside, there are no outputs or tone controls for the individual sounds, but a number of well documented modifications can be found on the Internet that add these features. Made in Japan. It in perfect working condition and optical in very nice condition too. It comes with its original box, softcase and owners manual. It runs with a 9V adaptor not included or batteries included The serial number is 373000. Roland introduced their first simple and affordable drum machine to bear the BOSS Dr. Rhythm brand the Offering four sounds, an Accent and a limited number of programmable patterns. It was followed by the Dr. Rhythm Graphic DR110 in 1983, which offers a wider selection of sounds, preset patterns, an increased number of programmable patterns and the ability to chain patterns together. The sounds are Kick.

Another socket provides for a trigger signal, emitting a pulse for every accented step in a pattern.

The patterns are organized into four banks of eight patterns each. It has been fully tested and works great. It comes with the original case as pictured. Paypal is preferred. US shipping only. It will be well packed and insured. And only 450. more. And like most Boss equipment, could be run from a 9 supply or. Although not designed as a high-end product. The DR110s voices used voice circuits. The DR110 used a 4 HD33790A44 and 1 of PD444C memory. The DR110s six drum voices were Drum sounds bass drum, open closed hi hat, As with most previous Roland drum machines. However as with several earlier Roland drum machines the relative balance between the bass and snare drums versus the hi hat and cymbal. An accent volume increase could also be added on any pattern step. The amount of accent was globally variable with a knob. Rhythm patterns The DR110 offered 16 preset patterns. And 16 memory locations for the user to program their own patterns. Each pattern could be divided into 16 or 12 steps. The DR110 also has two It comes with the original box. Padded case and user manual.

I bought this new old stock from a drum store that was going out of business, and they say that they bought this when they first came out in the early 1980s, but it never sold, so it was put in the back storage closet and remained there until I bought it. Everything looks brand spanking new with the exception of a small crack right above the battery compartment, but it does not affect the performance of the unit at all. The power supply is NOT included. Here is some information that I have found about this cool piece of gear. This is great for instrumentalists that just want to create simple drum patterns and loops to play along with. In 1980, Roland introduced their first simple. It was followed by the Dr. Rhythm Graphic DR110 in 1983, which offers a wider selection of sounds, preset patterns, an increased number of programmable patterns and the ability to chain patterns together to form songs. The simple step programming of the first Dr. Rhythm, with alternating button presses for notes and rests, is augmented by an LCD with a grid showing the individual notes in the current pattern. The sounds are Kick, Snare, Closed HiHat, Open HiHat, Cymbal and Clap. The sounds are totally analog, and sound crisp and punchy, thanks to tone generation circuitry that is more sophisticated than the Roland TR606 Drumatix. A balance knob alters the level of the Kick, Snare and Clap relative to the other sounds, while an accent knob controls the amount of emphasis applied to accented steps. There is also a volume knob, which controls the overall level of both the main and headphone Boss DR110 Drum Machine in very nice condition with original case. No power supply or manual. Tested by a synth and drum machine collector and geek. Condition The case has its fair share of wear. But that's why the drum machine doesn't. The drum machine is very clean. It's not mint, but it's a great example. The buttons feel fresh and they are very responsive. The screen is rather on the faint side.
