I wanted to just read up on my camera and everything it can do, because Im the kind of person who just likes knowing everything about something. I learned more than I expected to and the author is very down to Earth and easy to understand. He phrases things the way a normal, casual photographer will understand. I realize that the books not perfect if youre already knowledgeable about DSLRs and you probably will outgrow this book as you become more and more experienced with your camera, but this is a great jumping off point for someone who wants more than the manual, but who doesnt want a book on digital photography in general. The book is thorough, enjoyable and educational. While meeting some of my requirements the book is so full of typos and misinformation that it is not a reliable instructional reference. For example, in the section on how to set the AutoFocus to use a specific AF point the instructions offered are completely incorrect. The author fails to show or explain the AutoFocus Point Selection button. It seems that the book was written using a preproduction example of the camera or press releases, not an actual production camera. The saving grace of the book is that there are a number of good explanations about complex components such as the sensor and RAW files. My advice would be to anyone purchasing this book is to be careful using the suggested feature setting instructions. Cross check any information with the Canon owners manual before heading out of a shooting session. They always have easy to understand information and tips that make it much easier to understand how to use a new camera. Read it cover to cover and then keep it handy for occational refreshers, and you will be a better photographer. Please revert to the way things used to be. Sorry, we failed to record your vote. Please try again I have read the instruction manual from cover to cover and have fiddled with pretty much every setting on the camera, this book definitely expands on it and tries to give a few hints here and there on when to use settings and how. What it won't do is teach you photography or technique!!! The book is well laid out and comes with a handy Quick reference card of all the camera's features for your wallet which I'm sure will come in handy from time to time. Sorry, we failed to record your vote. Please try again He has found it very helpful. Sorry, we failed to record your vote. Please try again If that describes you, it's a wonderful book. It's a lot more interesting and user-friendly than the instruction manual for the 30D, but if you're a serious amateur or a pro who's converted to digital, it's simplistic. That's not to say I haven't found it helpful. There isn't really anything that I didn't already know, but the presentation is well done and it makes for great quick reference. I was hoping for something a little more advanced when I ordered it, so in that respect I was disappointed. So, about the 4 star rating I gave it. It's an average 3 stars if you're an adept photographer, 5 stars if you're not so experienced. Sorry, we failed to record your vote. Please try again This book explains so much more than the owner's manual and it's a million times easier to read and understand. There are a few times when I have had to flip back and forth to find illustrations so that I can understand what function we are applying to it. I think that is true of any book but I do feel the illustrations are placed better within the book than most books are. I have enjoyed having it and it fits well in my big camera bag so I can take it with me and refer to it. WELL WORTH the money and time! Sorry, we failed to record your vote. Please try again However, if you have somewhat of an understanding for photography I would pass on it. In my opinion it is just a fancier version of the instruction manual that came with the camera. It has decent illustrations and is well written. It's a nice book for anyone who has recently bought a Canon 30D and serves as a good reference book. Sorry, we failed to record your vote. Please try again Buy this book. I've only

begun using it and I sure wish I'd seen it was available when I first bought my 30d. No, it is not just a rehash of the Canon manual it actually explains the how AND why. Sorry, we failed to record your vote.

Please try again Sorry, we failed to record your vote. Please try again I now have the 40D but will probably wait till the author writes one for it before I buy any third party book. Sorry, we failed to record your vote. Please try again. Heres a quick tutorial to teach you the basics of these three types of operations. Getting Started Make sure you have charged the battery then insert it into the camera. Attach the lens. Most lenses attach by lining up with the red dot on the camera body. Set the lens to autofocus and carefully insert the compact flash CF card. Make sure you insert the card correctly, otherwise you might damage the cameras card terminals. Set the power switch to on and the mode dial to full automatic, which is the green icon. Taking the Shot Focus on your subject. You will see small points in the viewfinder. These are autofocus points which the camera will use to focus on the subject. To focus the lens, press the shutter release halfway down. Take the picture by steadily pressing the shutter release all the way down.

Review the Image You will see the image you have taken on the cameras LCD for a few seconds. To replay that image press the playback button, which is the button on the back of the camera with an arrow icon on it. The image will appear on the screen. Using Zone Modes The photograph you just shot in Section two used the EOS 30Ds fully automatic mode. The camera will optimize the shot for that subject. For example, in portrait mode, the camera will blur the background to make the subject stand out and in sports mode, it will freeze the action. Using SemiManual Settings Again, using the mode dial you can manually adjust the camera. This will give you more control than the zone mode. The P designator stands for program auto exposure. The camera will set the shutter speed and aperture dependent on the subjects brightness. The Tv designator stands for Time Value and is the shutter priority auto exposure mode. The camera sets the aperture to the brightness but you set the shutter speed by rotating the main dial. Other Manual Settings The EOS 30D allows you to set the aperture and the camera sets the shutter speed. Set the mode dial to Av. The aperture is adjusted using the main dial. You can set both the shutter speed and the aperture in M mode. The shutter speed is adjusted with the main dial and the aperture with the quick control switch and quick control dial which are on the back of the camera.
